Comments.

50X1-HUM

(2) This ground unit is probably assigned to one of the bomber regiments of the 8th Gds Bmr Div located in Strashof.

(3) This belief is supported by the fact that after 24 February 1949, only dismantling work was performed on this aircraft. The p oduction numbers do not indicate the year of construction nor the manufacturing plants. The Pe-2s are erroneously designated Po-2 in the note book.

50X1-HUM

- (h) As the attached document was translated into foreign languages twice, the correctnes of the translation cannot be warranted, and another check would be recommended, using the original documents. For original documents, see Annex.
- (5) The following instruments and devices were identified from the note book:

On the engine: [C-1000 one generator at each engine PK-32-100 Slide resistence

CER-56A One starter engine for each inertia starter

Coupling fitting for starter engine

СБА-56К ТЭ-22 Electric rotation counter K**T7 -**4716

The inertia for each engine with resistence chil One transformer for each magneto

```
Airframe:
                Landing gear limit switch. The same designation
    BK-41
                is being used for the limit switches of the tall
                wheel, landing flaps, and tail plane trimming gear,
                and simultaneously for the extension mechanism of
                the dive brakes.
                Tail plane trimming gear, if referred to as a
     83-K
                separate unit.
    rpu-NP)
    rpu-wu) Motors for operating the landing flaps
     KPP-1 "grid" Control motor for the dive brakes
                Control motor for the bomb doors.
     KPC-1
                Transformer indicator
     YC-40
     PK-4 )
                Rudder trimming mechanism. It cannot be determined
                which part of the mechanism is concerned.
     PK-15)
Control equipment in the cockpit:
     BM-335
                Ignition switch
                Short circuit switch
     82-K
     4-2 :
                Accumulator
     UK-12
                Oxygen indicator
     K_{11} - 3
                Oxygen line
     YPLA or YPU Fuel switch with pump mechanism
                Fuel gauge
     Γρ-1
Radio equipment:
     PCIS-3 Inc Radio transmitter
     YC-l
                Radio receiver
     PHK0-10
                Radio compass
                Artiricial horizon
     AM-1
     ATT-2
                Variometer
     Cl<sub>4</sub>-3
                Intercommunication radio
     CTY2
                Radio telephone system
     MK-2
                Presumably gyroscopic compass. The instrument is
                believed to be fitted with an air-driven gyroscope.
     YT-1, YT-3
     YN-1. AN-1 Indicators of the MK-2 set.
     PY-lla
     PYK-300
                 Transformers of the \( \bar{\cappa} \) MK-2 set
     0115-1
                 Presumably an improved model of the 900-1 and 000-1a non-
                 automatic bomb sight without stability, which was used
                 during the war
```

(6) The purpose of the YP-2 instrument cannot be determined. This set is fitted with a collector and is mentioned for both engines. The devices MC-1 and TX-1 current consumers are also unknown.
